Professional Summary

Full-stack Software Engineer with **4+ years of professional software development experience** and a strong background in **TypeScript/JavaScript, React, Node.js ecosystem, RESTful APIs, distributed web applications, and production engineering**.

Experienced across both front-end and back-end development, currently working with an approximate **60/40 front-end to back-end scope**. Comfortable developing data-intensive user interfaces, backend services, API integrations, workflow automation, and internal engineering platforms using **TypeScript/JavaScript, Node.js, Python/FastAPI, and Go**.

Strong understanding of **microservices, API design, asynchronous systems, SQL databases, Docker, CI/CD, system integration, production troubleshooting, and scalable application architecture**. Experienced in working independently and with international teams, owning technical decisions, reviewing code, mentoring engineers, and delivering business-critical software under fast development cycles.

Technical Skills

- **Languages:** TypeScript, JavaScript, Python, Go, SQL, HTML5, CSS3
- **Backend:** Node.js, RESTful APIs, FastAPI, API integration, service-layer architecture, asynchronous processing, authentication/authorization, WebSocket
- **Frontend:** React, Angular, Vite, responsive UI architecture, state management, reusable component systems, micro-frontends
- **Databases & Data:** SQL, relational databases, data modeling, query optimization concepts, NoSQL concepts, data transformation pipelines
- **Architecture:** Microservices, distributed systems, API design, system integration, event-driven workflows, scalable application architecture
- **DevOps & Infrastructure:** Docker, GitLab CI/CD, Git, Linux, automated deployment pipelines, production monitoring
- **Engineering Practices:** System design, code review, technical documentation, troubleshooting, performance optimization, mentoring, AI-assisted software development

Core Strengths

- Full-stack development with TypeScript/JavaScript, Node.js, React, Python/FastAPI, Go, HTML5, and CSS3
- Backend development involving RESTful APIs, service integration, asynchronous workflows, business logic, validation, authentication, and error handling
- Strong experience in the TypeScript/JavaScript ecosystem, including server-side application patterns, API integration, internal engineering tooling, and automation
- Microservices and distributed-system integration involving communication between multiple backend services and heterogeneous data sources
- Front-end architecture, reusable component systems, state management, performance optimization, and data-intensive operational applications
- Docker, GitLab CI/CD, automated delivery workflows, Git, Linux, and production-oriented engineering practices
- System design, technical documentation, code review, cross-functional collaboration, incident investigation, and engineering ownership

Professional Experience

Software Engineer ***WorldQuant LLC | September 2026 – Present***

- Develop and maintain production systems within the **Graph Monitor Engineering** team across both front-end and back-end responsibilities, with an approximate **60/40 FE-to-BE development scope**.
  - **Data Pipelines Operations**: Build and enhance the central operations platform for WorldQuant's data pipelines, providing operators with a unified interface for investigating delayed, failed, and unhealthy pipelines across multiple backend systems.
  - Integrate and orchestrate multiple backend APIs and operational data sources, handling data transformation, asynchronous states, error scenarios, and complex business workflows across the application stack.
  - Develop controlled remediation workflows allowing operators to investigate alerts, execute operational actions, inspect system state, and track activity across highly data-intensive production environments.
  - **Agentic Ops**: Develop a production platform for **alert-driven, human-in-the-loop operational runbooks powered by LLMs**, supporting graph-based workflow execution, backend service orchestration, automated investigation, and approval-controlled actions.

  - Contribute to backend development and service integration using **Python/FastAPI**, including API design, validation, service-layer logic, data transformation, error handling, and integration with internal systems.
  - Apply experience from the **Node.js and TypeScript ecosystem** to backend-oriented architecture, asynchronous application flows, service boundaries, API contracts, tooling, and developer workflows.
  - Took ownership of the application following project handover; audited architecture and integration boundaries and identified improvements across **security, performance, maintainability, code quality, and application structure**.
  - Design and deliver business-critical features involving multiple services, APIs, large operational datasets, authentication/authorization flows, asynchronous operations, and complex application state.
  - Design responsive and information-dense interfaces for investigating and operating on **large, complex production datasets**, with emphasis on usability, performance, and efficient operator workflows.
  - Establish repository-level **AI agent rules and reusable engineering skills** in Markdown, standardizing AI-assisted software development and enabling contributors to generate code aligned with project architecture, conventions, and quality standards.
- **Key Technologies:** TypeScript, JavaScript, React, Vite, Node.js ecosystem, Python, FastAPI, REST APIs, SQL, Docker, Git, CI/CD, AgentOS

Software Engineer ***Teko Solution | Nov 2022 – June 2026***

- Worked as a full-stack-capable engineer across multiple production applications including Danogo, Nio App, BTC Grow, and internal engineering platforms, with primary ownership on the front-end and regular involvement in backend/API development and system integration.
- Worked extensively with the **TypeScript/JavaScript and Node.js ecosystem** for application tooling, API integration, development utilities, automation, server-side workflows, and internal engineering services.
- Designed and integrated **RESTful APIs** supporting complex financial product flows including lending, borrowing, leverage trading, wallet connection, transaction processing, liquidation, airdrops, portfolio data, and transaction history.
- Implemented service-side integration logic for aggregating and transforming data from multiple APIs and external systems, including validation, caching, retry strategies, error handling, and asynchronous workflows.
- Built real-time and event-driven application functionality involving WebSocket communication, transaction lifecycle tracking, polling, background updates, and operational monitoring.
- Designed reusable application architecture and shared implementation patterns for **micro-frontend and distributed web environments**, enabling multiple independently deployed applications to reuse UI logic, shared state, and common integration layers.
- Worked as a key engineer integrating products with micro-frontend infrastructure, resolving cross-application compatibility, state-sharing, communication, deployment, and maintainability challenges.
- Developed internal engineering tools and automation using **TypeScript/JavaScript and Node.js-based tooling**, reducing repetitive engineering work and improving developer workflows.
- Optimized application performance and scalability across rendering pipelines, asynchronous state updates, bundle behavior, cross-window communication, and MPA/SPA architectures.
- Worked closely with backend engineers on API contracts, data structures, authentication, authorization, error handling, performance bottlenecks, debugging, and production incidents.
- Investigated production issues, handled urgent hotfixes, and built a real-time alerting solution that reduced Danogo incident detection latency from approximately **5 minutes to around 1 second**.
- Supported containerized and automated software delivery workflows using **Docker, GitLab CI/CD, Git, Linux, and production monitoring tools**.
- Participated in architecture discussions, technical proposals, code reviews, system troubleshooting, and cross-team technical decision-making.
- Wrote and maintained technical documentation, onboarding materials, architectural proposals, implementation guidelines, and integration documentation.
- Mentored interns and engineers, performed code reviews regularly, and frequently acted as engineering PIC for medium and high-complexity product epics.
- **Key Technologies:** TypeScript, JavaScript, Node.js, React, REST APIs, WebSocket, SQL, Docker, GitLab CI/CD, Linux, micro-frontends, Kotlin Multiplatform integration

Data Mining & Analysis in DeFi ***Faculty of Finance and Banking, UEB – VNU | Apr 2022 – Apr 2026***

- Part-time & seasonal research and engineering role.
- Developed data collection and processing workflows for DeFi governance, lending, financial markets, and blockchain datasets using **Python, REST APIs, SQL, and asynchronous processing**.
- Designed data normalization pipelines, reusable data models, scheduled ingestion workflows, and query pipelines supporting research dashboards and analytical applications.
- Built tools to collect and aggregate data from external APIs, normalize heterogeneous datasets, persist structured information, and expose reusable outputs for downstream analysis.
- Worked with backend-oriented concerns including API integration, retry/error handling, data persistence, batch processing, query design, and structured data transformation.

DApp Developer ***TVM Digital | Oct 2021 – Oct 2022***

- Developed full-stack functionality for OODLZ, working with **TypeScript/JavaScript, Node.js-based tooling, REST APIs, backend integrations, and responsive web interfaces**.
- Implemented complex financial and transactional workflows requiring coordination between UI state, APIs, external systems, and asynchronous operations.
- Contributed to application architecture, API contracts, service integration, error handling, transaction workflows, and production troubleshooting.
- Built responsive and reusable user-facing functionality while collaborating with backend and product engineers on end-to-end feature delivery.

Blockchain Researcher ***Blockchain Research and Application Laboratory, UET | Sep 2021 – Jun 2022***

- Built experimental distributed applications and full-stack prototypes for supply-chain traceability and anti-counterfeiting use cases.
- Worked with web applications, APIs, decentralized application architecture, structured data flows, and integration between front-end systems and distributed services.
- Participated in research-oriented system design, prototyping, technical experimentation, and documentation.

Machine Learning / Computer Vision Researcher & Teaching Assistant ***UET | 2019 – Jun 2022***

- Developed analytical thinking and software problem-solving skills through robotics, computer vision, autonomous navigation, and machine learning projects.
- Implemented experimental software and data-processing workflows for research projects involving image processing, robotics, and autonomous systems.
- Worked in collaborative academic environments while supporting teaching activities for Robotics (INT 3409).

Education

University of Engineering and Technology – Vietnam National University *2018 – 2022*

Information Technology – Computer Networks and Data Communication

Certificates & Achievements

- TOEIC: **980/990** (Dec 2025)
- Second Prize, **VMO Hackathon DApp Creator 2021**
- Coursera Specializations:
  - Blockchain Specialization
  - Deep Learning Specialization
- Second Prize, **Youth IT Competition 2017** – Creative Software, Cau Giay District
- Third Prize, **Youth IT Competition 2017** – Creative Software, Hanoi City
- First Prize, **IT Gifted Students Competition 2015** – Cau Giay District
- Third Prize, **IT Gifted Students Competition 2015** – Hanoi City
- Third Prize, **Hanoi Youth IT Competitive Programming**
- Teko Certified Cybersecurity Associate
- Teko Certified DeFi Master
